PART B – SPECIFICATIONS AND PRICING SCHEDULE

16. SPECIFICATIONS

17.1 SCOPE OF WORK

17.1.1 SCOPE

Stellenbosch Municipality has prioritised the need to stabilise energy costs and availability into the future; reduce greenhouse gas emissions and other emissions related to electricity generated predominantly from coal; as well as to improve local renewable energy industry participation as part of its economic development objectives. Uncertainty of Eskom's energy supply and tariff increases stresses this need, whilst renewable energy costs continue to decline.

The ongoing load shedding and the resulting negative economic impact on the communities in the Stellenbosch Municipal Area further enhances the need for exploring renewable energy generation options.

With the above in mind, Stellenbosch Municipality is introducing this RFP into the open market with its main purpose to contract with an IPP to supply 20 MW of renewable power to the Stellenbosch Municipality.

The following details and ore confirmations shall be included and form part of the RFP cost proposal submitted :

- Provide a turn-key renewable energy solution with all related infrastructure and grid connection(s).
- Be responsible for all aspects of the renewable energy project, including the detailed engineering investigations, design, manufacture, procurement, supply, shipping and importation, storage (as applicable), delivery, construction, erection, installation, commissioning, testing and energisation.
- Be responsible for providing performance guarantees of the complete project and its delivery capacity.
- Adhere to all Quality of Supply factors and guidelines contained in NRS048 and NRS 097, National Grid Code and Electricity Act.
- Be responsible for the operation and maintenance of the project for a period of twenty (20) years.
- Enter into a Power Purchase Agreement (PPA) with Stellenbosch Municipality for a period of twenty (20) years.
- Obtaining all applicable regulatory permits and/or licences, including environmental approvals as necessary.
- Perform a quality of supply assessment and determine if any compensation equipment may be required, and which are allowed for.
- Do detail grid capacity studies and fault level studies before implementation of the projects.

- Yearly quality of supply study by an independent service provider approved by the municipality.
- Five yearly financial audit by independent specialist as approved by the municipality.
- All relevant legislation having an impact on a proposal needs to be considered.
- The cost of connecting to the Stellenbosch grid must be included in the IPP cost.
- Stellenbosch will purchase all energy generated by the IPP which can be absorbed into the network.
- The option of wheeling power to the other Stellenbosch networks, within Stellenbosch area, can be investigated for cases where the local capacity is exceeded.
- During Eskom load shedding, planned and breakdown maintenance on the network (within agreed limits), no or reduced power may be able to be injected and thus cannot be purchased from the IPP.
- It may also not be possible to wheel power over the Eskom network as this may also be disconnected during load shedding.
- The IPP proposal must stipulate the % of generation expected during the Eskom TOU periods and the price required for power injected as a fixed R/kWh for all energy.
- The quantity of energy, kWh, will be measured by the Stellenbosch meters and proforma bills be issued to the IPP which will be payable within terms as indicated in the PPA.
- The prospective IPPs must show proof of bankability of the project and Commitment of financiers to the project.
- At the expiry of the twenty (20) year period of the PPA, the renewable energy plant with all infrastructure, equipment and land (may include lease) will be transferred to Stellenbosch Municipality at no cost.

17.1.2 TENDER REQUIREMENTS

The proposals provided as part of this RFP process must include the following minimum details:

- A business model and proposed methodology
- The capacity of the proposed installation(s) in MVA or MW
- The availability of the above capacity, average MWh per year
- The demonstration of the anticipated value for money to be achieved through the new generation capacity project

- The type of energy that will be used for electricity generation
- The likely life span of the proposed installation
- Water requirements
- Generation forecast over the 20 year period of the PPA
- Construction schedule
- The legal, financial and technical requirements including consents that will be required in order to procure the new generation capacity
- A risk assessment. This refers to the proposed allocation of technical, financial and operational risk between the prospective buyer/s and the seller, and between the seller and the distributor
- Summary detailing each location, applicable equipment/size, and predicted system energy production (kWh)
- Details of a web-based monitoring system to be available for the 20-year period, accessible by the Municipality

17.1.3 TECHNICAL DETAILS

Single line diagrams of the details of the Stellenbosch 66kV and 11kV networks are available on request.

Stellenbosch Municipality would prefer that the IPP power be connected to the Stellenbosch “Main Substation” as indicated on the included drawing. Depending on the size of the IPP, the possibility to connect into one of the other bulk infeed substations or the 11 kV network could be considered. The generation limits of such networks would first need to be determined and any constraints need to be incorporated into the IPP estimates and details of the proposed network connection must be provided.

All costs associated with the connection from the IPP to the Municipal grid will be for the account of the IPP. This includes the following:

- Capital, operations and maintenance costs of switchgear at the IPP.
- Capital, operations and maintenance costs of cables / lines including servitudes from the IPP to the municipal grid. (The maintenance costs could possibly be covered by way of municipal network charges.)
- Capital cost of connection, including switchgear and controls at the municipal substation / network.
- Any network capital charges (augmentation fees) in case where the demand on any network will be increased due to the IPP generation.

The half hourly profiles of each of the indicated substations are available on request.

It is important that the IPP must analyse these profiles in making estimates about the amount of generation that can be injected into the network.

It must be noted that during load shedding the networks would be dead and special arrangements will have to be made to be able to possibly make use of some of the IPP capacity during these periods.

The availability factor of the renewable plant shall be minimum 90% based on a 12-month rolling Performance Ratio. Should the availability be less than 90% of the agreed performance of the plant, a penalty equal to the monetary value of the loss from the renewable energy will be recouped from the IPP.

In case of an IPP who intend to wheel power from outside of the municipal area of supply, thus through the Eskom network need to include in the tender the cost of Eskom wheeling including Maximum demand and Access charges.

17.1.4 POWER PURCHASE AGREEMENT (PPA)

A PPA will need to be signed between the municipality and the successful IPP after the successful completion of the Section 33 process. The following in this respect:

- Such agreement will need to contain conditions required by the municipality,
- requirements of the IPP and that of the Bank / investor.

In view of this an interactive process will be followed to compile a PPA acceptable to all parties.

The following provisions will be addressed in the PPA:

- Special financial provision for the costs of the decommissioning of the Facility and the rehabilitation and closure of the Project Site and the post-closure monitoring of environmental impacts in respect of the Facility upon the termination of the PPA, whether following a premature termination of the PPA due to Seller Default, Corrupt Act or Government Default (i.e. premature termination) or upon the expiry of the term of the PPA (i.e. final closure).

The PPA will also stipulate what other agreements / formalities will have to be complied with such as the connection/supply agreement with the following obligations :

- Make application for connection to the municipal grid
- Pay the required connection fees and provide guarantees
- Sign the required Municipal supply agreement and agree on all fees and tariffs applicable
- Fulfil any other requirements stipulated by the municipality

The total project must be completed and full power flowing into the network as from two (2) years after signing of the PPA.

The total cost shall include all taxes and shall be expressed as a R/kWh price.

The R/kWh price will increase on the first day of July every year in line with the national Consumer Price Index (CPI) as published by Stats SA.

“The annual inflation rate is the change in the index of the relevant month of the current year compared with the index of the same month in the previous year expressed as a percentage. The inflation rate is the annual change in the CPI index for all items.”

As an example the annual increase in R/kWh price for 1 July 2023 to 30 June 2024 will be increased by 5.4% on the 2022/2023 price.
