CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Municipal Bidding Document (MBD) must form part of all bids¹ invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
 - 3 Municipal Supply Regulation 38 (1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
 - a. take all reasonable steps to prevent such abuse;
 - b. reject the bid of any successful bidder if that successful bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
 - c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.
 - 4 This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
 - 5 In order to give effect to the above, the attached Certificate of Bid Determination (MBD 9) must be completed and submitted with the bid:

1 Includes price quotations, advertised competitive bids, limited bids and proposals.

2 Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.

- 7.4.2** Soft Rock – Soil including hard shale, dense rocks exceeding 75mm diameter that can only be removed with the use of mechanical aid to 0.5 m³ in volume.
- 7.4.3** Hard Rock – The term "Rock" were used in connection with excavation shall mean boulders of 0.5m³ or more each and such hard material other than, road foundations as can only be removed in the opinion and to the satisfaction of the Project Manager, by barring, wedging, jack hammering, drilling, splitting or blasting if permitted in writing by the Project Manager. The Successful bidder must provide for whatever method of removal may be adopted and there is no guarantee given or implied that blasting shall be adopted. Blasting will only be permitted as specified in the Conditions of Contract.
- 7.4.4** Should the Successful bidder consider that any of the excavations encountered are in rock, he must notify the Project Manager in writing immediately. Failing such notification, the excavations will be assumed to be a material as defined above in soft soil and shall be measured and valued accordingly.
- 7.4.5** Condition of the trench - If the Project Manager is not satisfied with the quality of the exposed surface after excavation, he may instruct the Successful bidder to remove all unsatisfactory material and refill with approved grade "B" fill as herein specified.

- 7.4.6** Laying and Installing of the 33kV cable- The cable must be installed in a trefoil formation and must be spaced at least 800 mm between circuits and if one circuit, placed in the middle of the trench. The 800 mm must be measured from the centre line of the trefoil formation. The cables must be bound every 1 metre to ensure the trefoil formation. Cables would be installed on a bedding of 100 mm sand (measured after light compaction) in a 1400 mm deep trench. The cable would then be cover by a layer of 200 mm sand (measured after light compaction) and then with concrete slabs for protection.
- 7.4.7** The concrete slabs will be at least 25 mm thick, 15 MPa steel reinforced concrete and will form a **continues** protective layer directly over each trefoil laid run of power cable. The thermal resistivity of the bedding sand would be 1,2 K-m/W or lower with a ground temperature variation between 15 and 27 °C.
- 7.4.8** Security - The successful bidder must include the cost for site security services during the installation period especially during night times to ensure that theft of equipment and materials is prevented.
- 7.4.9** Backfilling - Following the cable installation, the trench shall be backfilled to a safety level of approximately 300 mm above the concrete slabs size (where necessary), otherwise above the electric cable this will only be applicable as instructed by CENTLEC. The further backfilling of the trench by the successful bidder shall not commence until the successful bidder has received the authority of the Project Manager. The layers of backfill are not to exceed 150 mm measured after compaction. Backfilling of trenches shall proceed downhill wherever possible. The material used for backfilling is to be the in-situ material excavated from the trench when such material is of sufficient grade to meet the Project Manager's requirements.
- 7.4.10** Compaction of Fill - The compaction of the 150 mm thick layers is to be done with an approved vibrating plate compactor, weighing not less than 250 kg or more than 450 kg. In no case however may the successful bidder use a heavier compactor until a minimum thickness of 750 mm of material covers the cable. For sand the compaction shall not be less than 100% of the maximum density obtained from the modified AASHTO (American Association of State Highway and Transportation Officials) test for the type of sand. For other approved material the minimum Compaction will be 93% of the maximum density obtained from the modified AASHTO density test for this material or to the density as specified in the project specifications.
- 7.4.11** Trenches in roadway – The backfill required in the trench shall match that of the corresponding road foundation layers and shall be compacted accordingly. Trenches crossing carriageways shall be backfilled up to the underside of the sub-base layer with a 1:18 cement/sand mix in lifts not exceeding 200 mm, and compaction 95% Mod AASHTO (CBR of 100, DCP = 32 blows per 100 mm to a depth of 300 mm and a CBR of 45, DCP = 17blows per 100 mm for the rest of the trench at any position).
- 7.4.12** The existing asphalt surface must be cut with a diamond cutter 150 mm wider on each side than the trench width.

7.4.13 Compaction of Backfilling - Compaction is to be carried out as specified previously. Compaction of each layer under construction shall only be carried out when the material in that layer has been mixed and watered to the satisfaction of the Project Manager. The Successful bidder shall advise the Project Manager when the compaction of the layer has been carried out to the extent required. The Project Manager will then inspect the layer and, if he deems it necessary, will conduct field density tests to determine the degree of compaction attained. The Project Manager may instruct the Successful bidder to re-compact at his own expense any section of the layer which has not been compacted as specified.

If he deems it necessary the Project Manager may instruct the Successful bidder to cut out any weak spot, repair it with sound material, and re-compact it all at his own expense to the satisfaction of the Project Manager. The Successful bidder shall repair in a similar manner all damage caused by any field density tests having been carried out. When the Project Manager is satisfied with the compaction obtained, he will authorise the construction of the following layer; in no case shall any materials be placed on the approved layer without the prior written authority of the Project Manager. Bitumen MC 30 prime coat must be used to ensure proper bonding between new asphalt & top layer.

7.4.14 Placing of Base Course (Flexible Pavement Type) - The base course will be constructed in a layer, or layers, of 150 mm or 100 mm in thickness, measured after compaction.

7.4.15 Compaction of Base Course - After being shaped to level and cross-section, each layer shall be compacted to a minimum of 98% Modified AASHTO Density over the full width of the layer.

7.4.16 Preparation of Surface - After the final layer has been compacted to the required density at optimum moisture content, the final surface shall be watered and subjected to additional rolling in order to obtain a firm, even, well- knit surface. Watering, rolling with approved equipment, and sweeping by means of stiff brooms shall continue until all excess fines on the surface of the base course have been distributed over the surface of the layer. Any areas deficient in fines shall be corrected by the addition of approved fine aggregate and the brooming of such fines into the surface voids of the layer shall continue until a firm base with a closely knit surface is obtained, free from nests of segregated materials, loose aggregate or other irregularities.

All excess fines shall be swept off the surface by means of brooming and the base allowed to dry out. The final surface shall present a mosaic of regular stone faces free from soil binder and foreign material. The surface of the base course is to be kept in good condition to the satisfaction of the Project Manager prior to the placing of any bituminous course thereon, and any damage or defects shall be made good by the Successful bidder at his own cost. The premix laid in the trench shall be placed slightly higher over the complete strip to allow for compaction, which will be obtained after rolling. The surface of the completed premix layer shall present a smooth, solid and homogeneous surface, true to

level and camber or cross fall (as the case may be) and free of cracks or other irregularities. The asphalt being replaced must be the same thickness as the adjacent asphalt.

- 7.4.17** The Standard Specifications for Road and Bridge Works for State Road Authorities 1998, prepared by the Committee of Land Transport Officials, (COLTO), as amended, shall apply to this contract. The amendments are those issued by COLTO and reproduced in Part B1, together with additional amendments as set out in Part B2. Where reference is made to the General Conditions of Contract and Sub-Clauses thereof in the above mentioned Standard Specifications, they refer to the appropriate edition of the "General Conditions of Contract for Road and Bridge Works for State Road Authorities," issued by COLTO (Clause 1115 of the Standard Specifications refers).
- 7.4.18** Standard Specifications for Road and Bridge Works for State Road Authorities 1998, prepared by COLTO, as amended, shall apply to this contract. Where reference is made to the General Conditions of Contract and Sub-Clauses thereof in the abovementioned Standard Specifications, they refer to the appropriate edition of the "General Conditions of Contract for Road and Bridge Works for State Road Authorities," issued by COLTO (Clause 1115 of the Standard Specifications refers).
- 7.4.19** The successful bidder shall take full responsibility for the quality of all materials and services supplied.
- 7.4.20 SANS Cement Specifications** – where reference is made in this specification or the Standard Specifications to the cement specifications, e.g. SANS 471: cement and rapid hardening cement, it shall be replaced with the new specification: ABS ENV 197-1,2: Cement compositions, specifications and conformity criteria on this contract, CEM II A-L class 32.5 N cement shall be used."

Repaired patches - shall be surfaced with the asphalt surfacing specified for this project. It shall be 30 mm thick, laid on a completed base course covered with a tack coat of 30% anionic stable grade emulsion at a rate of 0,5ℓ/m². The tack coat shall also be applied to the perpendicular sides of the surrounding surfacing and shall be properly broken and dry before placing the asphalt surfacing. The existing surfacing around the circumference of the repaired patch shall be cut back, if required by the Project Manager, for 100 mm wide and 30 mm deep, and be surfaced together with the surfacing of the patch, as an integral part thereof. **Repair of Surface failure: (Remove 300 mm, replace with 2 layers, one of 150 mm sub-base layer and one of ±125 mm base layer with a 30 mm thick new asphalt seal layer).** It is of the utmost importance that patching should be done correct and neatly and also that it should be stable and water resistant. All surface failure shall be excavated in a square slightly bigger than the failure area. For the whole depth, all the unsuitable material shall be removed.

The sides of the excavation shall be vertical with steps on each layer as shown

SKETCH 1 – Trenching template

After all the unsuitable material has been excavated to the exact depth, the seal shall be removed 100 mm wider than the prepared hole. (The removal of the seal shall be done rectangular and neatly with a cutting machine. Lines and chalk shall be used to mark it out rectangular.) Fill the hole in layers not thicker than 75 mm – 100 mm layers with material as described. The site supervisor shall measure the correct amount of gravel, emulsion, cement, lime, water, etc. needed for the filling. A concrete mixer shall be used for the mixing of the materials. Each layer shall be compacted separately with power- or hand compactors.

The whole surface of the backfilled area must be compacted including the edges and corners. If the existing seal layer consists of asphalt, the hole shall be filled to just beneath the asphalt layer with a gravel layer. Where other seals were used, filling with the gravel mix shall be at least 30 mm from the road surface in order to leave room to be filled with hotmix asphalt. Prime coat is now applied to the exposed areas. MSP1 or similar shall be used for this purpose.

Depending on the weather conditions, the tack coat shall be left to dry for at least 30 minutes, before it is filled with asphalt. Place asphalt in layers of 30 mm (maximum) and compact firmly. It is important that the loose pre-mix is higher than the road surface, when the last layer is placed. When the last layer is compacted, a straight edge shall be used in order to fill up cavities and higher parts be raked evenly. The hot-mix asphalt may tend to stick on the compactors, in which case the foot plates can be lubricated lightly with diesel. Patchwork shall be 2 – 3 mm higher than the existing road surface after it is being filled and finished off, but never lower. River sand or crusher sand can be used to blind the patch work. No heating on site of the asphalt shall be allowed.

7.4.21 Grass & plants must be re-instated to its original state. Minimum damage must be caused to the root systems of trees. If it can be proven that a tree died to the Successful bidders excavation, he will be liable for the replacement cost.

7.4.22 The Successful bidder will be responsible for a period of 24 months from payment for all trenching, road crossings & drive ways should any sagging or weakening occur. All road crossings and driveways must be done according to the wayleave instructions.

7.4.23 Road crossings must be maintained daily until repair is done by means of gravel filling.

10.36.2. F.3.2 Issue addenda

If necessary, issue addenda that may amend or Amplify the bid documents to each successful bidder during the period from the date that bid documents are available until seven days before the bid closing time stated in the bid data. If, as a result a successful bidder applies for an extension to the closing time stated in the bid data, the employer may grant such extension and, shall then notify all successful bidders who drew documents.

10.36.3. F.3.3 Return late bid offers

Return bid offers received after the closing time stated in the bid data, unopened, (unless it is necessary to open a bid submission to obtain a forwarding address), to the successful bidder concerned.

10.36.4. F.3.5 Opening of bid submissions

- 10.36.4.1. F.3.5.1 Unless the two-envelope system is to be followed, open valid bid submissions in the presence of successful bidders' agents who choose to attend at the time and place stated in the bid data. Bid submissions for which acceptable reasons for withdrawal have been submitted will not be opened.
- 10.36.4.2. F.3.5.2 Announce at the meeting held immediately after the opening of bid submissions, at a venue indicated in the bid data, the name of each successful bidder whose bid offer is opened, the total of his prices, preferences claimed and time for completion, if any, for the main bid offer only.
- 10.36.4.3. F.3.5.3 Make available the record outlined in F.3.4.2 to all interested persons upon request.

10.36.5. F.3.6 Two-envelope system

- 10.36.5.1. F.3.6.1 Where stated in the bid data that a two-envelope system is to be followed, open only the technical proposal of valid bids in the presence of successful bidders' agents who choose to attend at the time and place stated in the bid data and announce the name of each successful bidder whose technical proposal is opened.
- 10.36.5.2. F.3.6.2 Evaluate the quality of the technical proposals offered by successful bidders, then advise successful bidders who remain in contention for the award of the contract of the time and place when the financial proposals will be opened. Open only the financial proposals of successful bidders, who score in the quality evaluation more than the minimum number of points for quality stated in the bid data, and announce the score obtained for the technical proposals and the total price and any preferences claimed. Return unopened financial proposals to successful bidders whose technical proposals failed to achieve the minimum number of points for quality.

10.36.6. F.3.7 Non-disclosure

Not disclose to successful bidders, or to any other person not officially concerned with such processes, information relating to the evaluation and comparison of bid offers, the final evaluation price and recommendations for the award of a contract, until after the award of the contract to the successful bidder.

10.36.7. F.3.8 Grounds for rejection and disqualification

Determine whether there has been any effort by a successful bidder to influence the processing of bid offers and instantly disqualify a successful bidder (and his bid offer) if it is established that he engaged in corrupt or fraudulent practices.

10.36.8. F.3.9 Test for responsiveness

- 10.36.8.1. F.3.9.1 Determine, on opening and before detailed evaluation, whether each bid offer properly received:

- a) complies with the requirements of these Conditions of Bid,
- b) has been properly and fully completed and signed, and

- c) is responsive to the other requirements of the bid documents.

10.36.8.2. F.3.9.2 A responsive bid is one that conforms to all the terms, conditions, and specifications of the bid documents without material deviation or qualification. A material deviation or qualification is one which, in the Employer's opinion, would:

- a) detrimentally affect the scope, quality, or performance of the works, services or supply identified in the Scope of Work,
- b) change the Employer's or the successful bidder's risks and responsibilities under the contract, or
- c) affect the competitive position of other successful bidders presenting responsive bids, if it were to be rectified.

Reject a non-responsive bid offer, and not allow it to be subsequently made responsive by correction or withdrawal of the non-conforming deviation or reservation.

10.36.9. F.3.10 Arithmetical errors

10.36.10. F.3.10.1 Check responsive bid offers for arithmetical errors, correcting them in the following manner:

- a) Where there is a discrepancy between the amounts in figures and in words, the amount in words shall govern.
- b) If the bills of quantities (or schedule of quantities or schedule of rates) apply and there is an error in the line item total resulting from the product of the unit rate and the quantity, the line item total shall govern and the rate shall be corrected. Where there is an obviously gross misplacement of the decimal point in the unit rate, the line item total as quoted shall govern, and the unit rate shall be corrected.
- c) Where there is an error in the total of the prices either as a result of other corrections required by this checking process or in the successful bidder's addition of prices, the total of the prices shall govern and the successful bidder will be asked to revise selected item prices (and their rates if bills of quantities apply) to achieve the bided total of the prices.

F.3.10.2 Consider the rejection of a bid offer if the successful bidder does not correct or accept the correction of his arithmetical errors in the manner described in F.3.9.1.

10.36.11. F.3.11 Clarification of a bid offer

Obtain clarification from a successful bidder on any matter that could give rise to ambiguity in a contract arising from the bid offer.

10.36.12.1. F.3.12.1 General

Appoint an evaluation panel of not less than three persons. Reduce each responsive bid offer to a comparative offer and evaluate it using the bid evaluation method that is indicated in the bid data and described below:

Method 1: Financial offer	1)	Rank bid offers from the most favourable to the least favourable comparative offer.
	2)	Recommend highest ranked successful bidder for the award of the contract, unless there are compelling and justifiable reasons not to do so.
Method 2: Financial offer and preferences	1)	Score bid evaluation points for financial offer.
	2)	Confirm that successful bidders are eligible for the preferences claimed and if so, score bid evaluation points for referencing.

10.36.12.2. F.3.12.2 Scoring financial offers

Score the financial offers of remaining responsive bid offers using the following formula:

$NFO = W_1 \times A$ where:

N_{FO} = the number of bid evaluation points awarded for the financial offer.

W_1 = the maximum possible number of bid evaluation points awarded for the financial offer as stated in the bid data.

A = a number calculated using either formulas 1 below as stated in the bid data.

Formula	Basis for comparison	Option 1	Option 2
1.	Lowest price or percentage commission/fee	$\left(1 - \frac{(Pt - Pmin)}{Pmin}\right)$	P_m/P

where:

P_m = the comparative offer of the most favourable bid offer.

P = the comparative offer of bid offer under consideration.

F.3.12.3 Scoring quality (functionality)

Score quality in each of the categories in accordance with the bid data and calculate total score for quality.

10.36.12.3. F.3.13 Insurance provided by the employer

If requested by the proposed successful bidder, submit for the successful bidder's information the policies and / or certificates of insurance which the conditions of contract identified in the contract data, require the employer to provide.

10.36.12.4. F.3.14 Acceptance of bid offer

10.36.12.4.1. F.3.14.1 Accept bid offer only if the successful bidder complies with the legal requirements stated in the bid data.

10.36.12.4.2. F.3.14.2 Notify the successful bidder of the employer's acceptance of his bid offer by completing and returning one copy of the form of offer and acceptance before the expiry of the validity period stated in the bid data, or agreed additional period. Providing the form of offer and acceptance does not contain any qualifying statements, it will constitute the formation of a contract between the employer and the successful bidder as described in the form of offer and acceptance.

10.36.12.5. F.3.15 Notice to unsuccessful successful bidders

After the successful bidder has acknowledged the employer's notice of acceptance, notify other successful bidders that their bid offers have not been accepted.

10.36.12.5.1. F.3.16 Prepare contract documents

If necessary, revise documents that shall form part of the contract and that were issued by the employer as part of the bid documents to take account of:
