PART C2 PRICING DATA

C2.1 PRICING INSTRUCTIONS

C2.1: PRICING INSTRUCTIONS

1 The Tender Data, the Contract Data, the Scope of Work, the Site Information and the Drawings shall be read in conjunction with the Schedule of Quantities.

2 The Schedule comprises items covering the Contractor's profit and costs of general liabilities and of the construction of Temporary and Permanent Works.

Although the Tenderer is at liberty to insert a rate of his own choosing for each item in the Schedule, he should note the fact that the Contractor is entitled, under various circumstances, to payment for additional work carried out and that the Employer's Agent is obliged to base his assessment of the rates to be paid for such additional work on the rates the Contractor inserted in the Schedule.

The measurement and payment clauses of each Specification, read together with the relevant clauses of the Specification Data, all set out which ancillary or associated activities are included in the rates for the specified operations.

3 Descriptions in the Schedule of Quantities are abbreviated and may differ from those in the Standardized and Specification Data. No consideration will be given to any claim by the Contractor submitted on such a basis. The Schedule has been drawn up generally in accordance with the latest issue of Civil Engineering Quantities¹. Should any requirement of the measurement and payment clause of the appropriate Standardized or Specification Data be contrary to the terms of the Schedule or, when relevant, to the Civil Engineering Quantities, the requirement of the appropriate Standardized Specification or Specification Data as the case may be, shall prevail.

4 Unless stated to the contrary, items are measured and paid for net, in accordance with the Drawings, without any allowance having been made for waste.

5 The amounts and rates to be inserted in the Schedule of Quantities shall be the full inclusive amounts to the Employer for the work described under the several items. Such amounts shall cover all the costs and expenses that may be required in and for the construction of the work described, and shall cover the costs of all general risks, profits, taxes (but excluding value-added tax), liabilities and obligations set forth or implied in the documents on which the Tender is based.

6 An amount or rate shall be entered against each item in the Schedule of Quantities, whether or not quantities are stated. An item against which no amount or rate is entered will be considered to be covered by the other amounts or rates in the Schedule.

The Tenderer shall also fill in a rate against the items where the words "rate only" appears in the amount column. Although no work is foreseen under these items and no quantities are consequently given in the quantity column, the tender rates shall apply should work under these items actually be required.

Should the Tenderer group a number of items together and tender one sum for such group of items, the single tender sum shall apply to that group of items pro rata and not to each individual item, or should he indicate against any item that full compensation for such item has been included in another item, the rate for the item included in another item shall be deemed to be nil.

The tender rates, prices and sums shall, subject only to the provisions of the General Conditions of Contract, remain valid irrespective of any change in the quantities during the execution of the Contract.

7 The quantities of work as measured and accepted and certified for payment in accordance with the General Conditions of Contract, and not the quantities stated in the Schedule of Quantities, will be used to determine payments to the Contractor. The validity of the Contract shall in no way be affected by any differences between the quantities in the Schedule of Quantities and the quantities certified for payment.

The ordering of materials shall not be based on the quantities in the Schedule of Quantities. Materials ordered from the Schedule of Quantities without prior confirmation by the Employer's Agent shall be at the risk of the Contractor. No compensation shall be paid for materials ordered erroneously and all costs shall be borne by the Contractor.

¹ The standard system of measurement of civil engineering quantities published by the South African Institution of Civil Engineers.

- 8 The quantities of work as measured and accepted and certified for payment in accordance with the General Conditions of Contract, and not the quantities stated in the Schedule of Quantities, will be used to determine payments to the Contractor. The validity of the Contract shall in no way be affected by **any** differences between the quantities in the Schedule of Quantities and the quantities certified for payment.

The ordering of materials shall **not** be based on the quantities in the Schedule of Quantities. Materials ordered from the Schedule of Quantities without prior confirmation by the Employer's Agent shall be at the risk of the Contractor. No compensation shall be paid for materials ordered erroneously and all costs shall be borne by the Contractor.

- 9 For the purposes of this Schedule of Quantities, the following words shall have the meanings hereby assigned to them:

Unit : The unit of measurement for each item of work as defined in the COTO Standardized Specification for Road and Bridge Works for State Authorities (2020 edition) or the Specification Data.

Quantity: The number of units of work for each item

Rate : The payment per unit of work at which the Tenderer tenders to do the work Amount
: The quantity of an item multiplied by the tender rate of the (same) item Sum :

An amount tender for an item, the extent of which is described in the Schedule of Quantities, the Specifications or elsewhere, but of which the quantity of work is not measured in units

- 10 Contractor Skills Development Goals (CSDG)

The Contractor shall determine the Contract Skills Development Goal (CSDG), expressed in Rands, which shall not be less than the tender sub-total multiplied by a CSDG (%) given in Table 2 of the Standard for the applicable class of construction works. T

Table 1: Construction skills development goals for different classes of engineering and construction works contracts.

Class of construction works as identified in terms of the CIDB regulation		Construction Skills development goal (%)

Final Tender Summary Section

The contractor's attention is brought to the following: The Employer shall include a line item under the final tender summary section. (Described as "Minimum Contract Skills Development Goal (CSDG)" as illustrated in the Table 1.1 below:

To prevent a tender being non-responsive, the Contractor shall take note of the required CSDG percentage (%) as prescribed in the final tender summary section. The percentage (%) factor multiplied by the sub-total of the tender amount will determine the minimum CSDG that needs to be achieved on the contract.

Table 1.1 Final Tender Summary section– Contract Skills Development Goal Example

Item	Description	Percentage (%) factor	Sub-Total of Tender Amount	Amount (Rands)

C3.1 DESCRIPTION OF THE WORKS

C3.1.1 EMPLOYER'S OBJECTIVES

The employer's objectives are to deliver public infrastructure using labour-intensive methods with the aim of services delivery, job creation and poverty alleviation.

The Employer requires the **Upgrading of 3.25km Siwela Road in Ward 04** from gravel to a formal block paved road. As part of the construction of the new road, job creation will occur through the employment of local labourers, and/or local subcontractors.

The Employer desires that the work required be of a high standard and be completed in the shortest practical time whilst creating jobs for local labourers and contractors.

EPWP REQUIREMENT

1. Expanded Public Works Programme (EPWP)

The service provider must provide the Municipality with a completed list of local labourers for EPWP registration, monthly reports on this to be submitted to the project manager. The aforesaid list must be updated and submitted monthly, inclusive of the following details:

- i. Salary / wages spent on local employees versus total wages / salary budget at site
- ii. Number of local employees employed versus per total workforce at site
- iii. Payments made to the local labourers

2. Demographics

Members of the community who are unemployed and who form part of the targeted groups not less than 60% women, not less than 55% (youth from 18 - 35 years of age) and not less than 2% people with disabilities should be given an opportunity to apply for work.

CONSTRAINTS

Restricted Site Access

Access to portions of the site may be restricted due to existing infrastructure, adjacent properties, environmental sensitivities, utility services, or operational requirements. The Contractor shall allow for phased construction and restricted access conditions in the tendered rates.

Existing Services

Numerous underground and overhead services may be present within the construction area. The exact location of all services is not guaranteed and the Contractor shall verify service positions before commencing excavation.

Working Around Existing Traffic

The works will be undertaken adjacent to live traffic. The Contractor shall maintain safe traffic movement and shall make provision for temporary traffic accommodation, signage, flag personnel and pedestrian management.

Operational Facilities

The facility shall remain operational throughout the contract period. The Contractor shall minimise disruption and maintain safe access at all times.

The project is located within Mbombela, in the semi-developed settlement of Zwelisha.

C3.1.3 EXTENT OF WORKS

The approximate length of the road to be upgraded is 3.25 km. The road is a single carriageway within a built-up area where there are a number of encroachments by household yards. The lane width will be 3m from beginning to end of road.

The pavement design includes the Roadbed 150mm layer, 150mm G7 sub-base layer, 150mm C4 base layer and the 80mm paving brick as a surface layer.

SI 1 project Location

1.1 Site Location

The project is located in Zwelisha Township within the City of Mbombela under the jurisdiction of the Ehlanzeni region of the Mpumalanga Province. The existing road under investigation is a local street adjacent to Zweilsha Road. The road is approximately 30Km away from Mbombela CBD heading in a North-East direction.

The start of the road is at Lat: Lat: 25°22'22.43"S, Long: 31° 10'5.93"E and ends at Lat: 25°22'8.86"S, Long: 31°10'30.70"E. The approximate length of the road including internal access roads is 3.25 km.

Figure 1: Locality Plan of the Project Area

SI 3 Photographic Evidence

SI 3 Climatic Condition

The climate of the project area is Savana Biome climate characterized by seasonal precipitation and sub-tropical thermal regimes with no frost. The mean daily maximum temperatures for summer months are between 26°C and 32°C. In winter, the daily minimum temperatures remain above 10°C. The area receives the lowest rainfall (2mm) in June and the highest (119mm) in December.

According to the Weinert, 1980, the area has a climatic "N" value of 2.2 which is associated with humid warm area and a surplus of water, where chemical decomposition is the predominant rock weathering mode.

Soils derived from the decomposition of bedrock of the area are associated with the following engineering properties:

- High permeability
- Uneven bedrock
- High erodibility
- Unstable slopes
- Semi-pervious to pervious soils
- Good compaction and workability

SI 3 Geotechnical Investigation

The published geological map series, 2530, Barberton at a scale of 1:250 000 shows that the site is covered by Nelspruit Granite suite overlain by Mpageni Granite. The site is dominated by Grey to white, coarse-grained biotite granite; weakly to very strongly porphyritic; veined by granodiorite; bimodal porphyritic granite veined by granodiorite with large phenocrysts. The site is also intersected by dolerite dyke.

The geological map for the area is presented below.

3.1 Materials Descriptions

Below are the different soil profiles encountered on site:

- **Topsoil** intersected in the majority of the test pits. This horizon comprises light brown to reddish brown conglomerates material of sandy gravel, with pebbles and boulders of rock materials extending down to an average of 0.3m below the surface.
- **Residual soil Residual** soils, derived from the in situ weathering of granite bedrock. They consist generally of light brownish/reddish gravel extending to between 0.30m and 1.0m in majority of the test pits.
- **Highly to moderately weathered Granite** bedrock described as yellowish brown/orange, highly to moderately weathered, soft to medium hard rock grading into moderately weathered closely to medium jointed medium hard rock which finally becomes slightly weathered medium jointed hard rock with depth.

3.2 Groundwater seepage and surface Run-off

No ground water permeability was encountered in any of the inspection pits dug on site. However, wet conditions were encountered throughout the site

SI 4 METHODS OF INVESTIGATION

4.1 Field Work

The field work phase of the investigation was conducted on 30th August 2021.

A total of seven (7) inspection pits designated TP1 to TP7 were excavated using a Track loader backhoe (TLB) machine advanced to depths ranging from 0.80m to 1.20m below natural ground level (mbgl). Approximately 250m interval was used in positioning the inspection pits along the length of the proposed route.

All inspection pits were profiled immediately after excavation by an Engineering Geologist in accordance with the method of Jennings et al., (1973) and are attached in Appendix B of this report.

4.2 In Situ and Laboratory Soil Testing

A total of 4 DCP test were carried out from 0m – 2m below natural ground level (mbgl). The DCP tests were carried out to assess the bearing capacity of the in-situ material below 1m. The number of DCP tests conducted were limited due to presence of rock outcrops along the proposed route.

Representative disturbed samples of the material recovered were taken for laboratory testing to determine the properties of the material and their suitability for use as road construction materials.

The soil samples were taken for **Road Indicator tests, Moisture/Density tests and CBR tests**. These tests evaluate the compaction characteristics of the site soils and permit an evaluation of their suitability for use as construction materials

SI 5 RESULTS OF THE INVESTIGATION

a. Laboratory Test Results

In order to assess more accurately the engineering properties of the various materials encountered on site and to assess the suitability of the in situ materials for the use as bedding and fill, the following material classification tests were carried out on selected samples during the investigation:

- Grading Analyses,
- Atterberg Limit Determinations and Linear Shrinkage Determinations,
- Moisture Density Relationship (MOD AASTHO),
- California Bearing Ratio (CBR)

Table 1: Summary of indicator test results

Pit No	Depth (m)	Particle Size %			Atterberg Limits %			GM	AASHTO/USCS classification; expansion potential
		Clay and silt	Sand	Gravel	LL	PI (WPI)	LS		
TP01	0.20-1.20	36	27	37	30	10.0 (360)	5.0	1.95	A-2-4 /GM; Low
TP02&3	0.80-1.20 0.90-1.10	17	12	71	36	12.0 (204)	6.0	2.49	A-2-7 / GM; Low
TP04	0.3-0.70	8	16	76	32	9.0 (72)	4.5	2.65	A-2-4 / GP; Low
TP07	0.0-1.10	12	22	66	34	14.0 (168)	7.0	2.52	A-2-7 / GM-GC; Low

LL – Liquid Limit
 PI – Plasticity Index
 LS – Linear Shrinkage
 GM – Grading Modulus

The results above represent the properties of clay gravel to sandy gravel material sampled on site. The lower percentage of fines accounts for the low potential expansion.

However; in the case of coarse grained soils the use of plasticity index can lead to incorrect materials classification (Look, 2016). The plasticity index is determined only for the material passing the 0.0425mm sieve and does not account for the coarser fractions. The use of the weighted PI (WPI), which is the product of the PI times the percentage passing the 0.425mm, is intended to report the percentage used and give the correct movement potential classification.

Table 2 below shows the range of WPI values and associated classifications.

Table 2: Weighted plasticity index (taken from Look, 2016)

CLASS	WEIGHTED PLASTICITY INDEX (WPI)	POTENTIAL FOR VOLUME CHANGE
A	< 1200	LOW+
B	1200 ≤ WPI < 2200	MEDIUM
C	2200 ≤ WPI < 3200	HIGH
D	≥ 3200	VERY HIGH

+ When applied to pavement a "Very low" value of < 200 is typically used

BID NO: COM90/2026 UPGRADING OF 3.25KM SIWELA ROAD IN WARD 04

The WPI for clayey sand gravel material ranges from 72 to 360 (WPI) falling to Class A, that is, low potential for volume change. Compaction tests were also conducted on the same material and the results are given below.

Table 3: Summary of compaction test results

Pit No.	Depth (m)	Modified AASHTO MDD (kgm3)	OMC %	CBR Values (%) Compaction MDD (%)				Swell (%)	TRH14:1985
				90	93	95	100		
				TP01	0.20-1.20	2047	9.1		
TP02&3	0.80-1.20 0.90-1.10	2029	7.9	14	18	19	34	0.3	G7
TP04	0.3-0.70	2069	8.6	26	29	29	49	0.2	G6
TP07	0.0-1.10	1929	10.0	11	14	17	37	0.5	G8

MDD – Maximum Dry Density
OMC – Optimum Moisture Content
CBR – California Bearing Ratio

The results indicate that the material has a maximum dry density ranging from 1925 to 2228kg/m³ and an optimum moisture content ranging from 7.0 to 9.7%. The CBR swell is low medium. The material classifies as **G6 to G8**. The material can be used as general fill (**Appendix C**).

b. DCP Test Results

A total of four (4) DCP tests were carried out across the site. DCP tests were done from 0 – 1 mbgl. The DCP tests were carried out to assess the bearing capacity of the in-situ material below 1m. The penetration resistance is expressed as millimeters per blow as shown in table 4 below

Table 4: Undrained Shear Strength Correlations with DCP test, after Brink *et. al*(1982).

CLAYEY (COHESIVE) MATERIALS		
DESCRIPTION (Consistency)	DCP (mm per blow)	SPT 'N' (blows per 300 mm)
Very Loose	>75	<5
Loose	30 – 75	5 – 10
Medium Dense	12.5 – 30	10 – 30
Dense	5 – 12.5	30 – 50
Very Dense	2 – 5	>50

The results show an average of **4.8** (mm/blow) with a bearing capacity of between **60 – >200kPa**. From DCP results, it was noted that the material consistency was **Medium Dense to Very Dense** for the. The DCP test results are attached in **Appendix D**.

c. Material Classification, Usage and Subgrade Treatment

The results of the laboratory tests, together with the dynamic penetrometer tests and the visual assessment conducted on site have been used to provide an indication of the suitability for use of the materials on site for the construction of the road. See table 5 below

Material Type	Classification	Usage and Subgrade Treatment
<i>IMPORTED /Transported (00-300mm)</i> . Brownish sandy gravel and rubble	Sandy Gravel material sampled classify as G7. However the transported material contains rubble material.	Material is not suitable to be used as road construction material.
<i>Residual (300-1000)</i> Gravel material.	GM =1.9 to 2.65 PI = 9-14 Soil classification: GP-GM, GC G8 to G6	Suitable for road construction materials, thus depending on the required final level (which we suggest should be raised to cater for suitable drainage), these materials must be considered selectively for use in the construction of fills on the road. Material may be ripped and re-compacted with cement or lime modification for use as sub-base layers. However this is only true up to the excavated depth.

Table 5: Summary of Materials Classification and Recommended Usage

The material making up the residual gravel is considered suitable for use in selected layers, if these are considered in the design. Care must be taken during excavation and stockpiling to ensure that unsuitable material is spoiled and not mixed with these materials. It must be noted that this qualification given in this report is based on assessments made in test pits and limited testing, it is thus recommended that continuous testing (prior to and during construction) be carried out to ensure material quality

SI 6 GEOTECHNICAL EVALUATION AND RECOMMENDATIONS

Various stages of the development are discussed below with comments, guidelines, and recommendations given to assist in making the project a success.

6.1 Bulk Earthworks

The field tests show that excavation using light conventional earth moving equipment can be used to excavate to an average depth of 1.5m throughout the site. However, it is advisable to consider a heavy plant with 30 tonne to 40 tonne capacity for the entire site and the level of slightly weathered granite bedrock may vary at position not exposed during the geotechnical investigation.

The steep sloping terrain of the site is likely to warrant excessive cuts and fills in some part of the road taking into account that cuts and fills should be determined by the required final elevation of the road. It is recommended that all earthworks be carried out in accordance with SABS 1200 or equivalent SANS standards and/or COTO of 2020.

All fill should be placed and compacted within an allowable error of $\pm 2\%$ of the materials Optimum Moisture Content. Subgrade fill should be compacted to at least 93% of the materials Standard Maximum Dry Density (MDD) value.

Road structure fill, including the Crushed Stone Base Course and the Select Granular Sub-base should be placed and compacted to at least 95% of the material's MDD value Both during and after construction, the site should be well graded to permit water to drain readily away and to prevent ponding of water anywhere on the ground surface. All terraces and earthworks in general should be sloped to a gradient of not less than 1 vertical in 50 horizontal to prevent ponding and ingress of water into the subsoil's. Surface drainage should be directed away from the crests of fill embankments to prevent over-topping and erosion of fill slopes.

6.2 Subgrade Treatment

Subgrade treatment shall comprise the normal rip/scarify and re-compact procedure. Any subgrade material deemed unsuitable from the design considerations shall be removed to such widths and depths as maybe required and disposed of accordingly. The excavated areas shall be backfilled with approved materials and compacted to the required density.

No design CBR or pavement designs were provided prior to this investigation as such no specific depths or widths of excavation can be specified in this report. However if the assumption is that current levels of the existing roads will be maintained, the subgrade treatment should then follow the excavation (and spoil or stockpile) of the fill layers.

6.3 Subsoil Drainage

Due to site terrains, it is evident that surface water is a concern which may thus raise the water table and give problems with groundwater inflow during excavations, especially during periods of heavy rainfall. Even though all excavations were water free, it is good practice to place subsoil drains at such fairly level sites. Noting that the water table may vary with climatic seasons thus, subsoil drains must be placed at the following positions, if any, to intercept groundwater and divert it around structures.

- Retaining walls
- At the toe of cuts
- Below the structural layers of roads and paved area

6.4 Excavation requirements

Excavation conditions across the majority of the site can be described as “Soft to Intermediate to hard Excavation” in accordance with SANS 1200D -Earthworks

Table 6: Excavatability Summary

Material Type	Excavatability	Average Depth (mm)	Proposed excavation Method
Residuum and very soft material	Soft	0-1000	TLB or Hand Excavation
Soft rock	Intermediate	1000-1500	Excavator
Hard rock	Hard	1500-2000 (Estimated)	Blasting

Material of “Intermediate Excavation Class” and possibly “Hard or Boulder Excavation Class” can be anticipated with depth below 1.5m due to the underlying slightly weathered granite bedrock.

However, in places where the bedrock is shallow and hard, a 30 tonne track mounted excavator may be required to get to the specific depth below existing ground level. This is however expected to be localized along TP4 to TP7 where granite outcrops are visible on the surface.

Provision for hard excavation (Blasting) will need to be made over the site for box cut on the exposed granitic rock outcrops.

Figure 3: Slightly Weathered Granite bedrock outcrops

SI 7 CONCLUSIONS

This report presents the findings of a detailed centreline geotechnical investigation carried out for the proposed upgrading of Siwela internal roads to paved standards within the Mbombela Local Municipality, in the Mpumalanga Province.

The investigation undertaken has concluded that the site is suitable for the proposed services, provided that the recommendations provided in this report are adhered to.

Finally, it should be noted that the subsoil conditions contained in this report relate to the information obtained from the inspection pits put down for investigation. It is possible that variances to the anticipated subsoil conditions will be encountered along during construction. It is therefore important that when such variances occur, they are reported to MS Mabuya Civil Laboratory (Pty) Ltd, for timeous assessment and recommendations for the necessary adjustments to construction procedure can be made
