F.3.1 Respond to requests from the Tenderer

F.3.1.1 Unless otherwise stated in the tender Data, respond to a request for clarification received up to five working days before the tender closing time stated in the Tender Data and notify all Tenderers who drew procurement documents.

F.3.1.2 Consider any request to make a material change in the capabilities or formation of the tendering entity (or both) or any other criteria which formed part of the qualifying requirements used to prequalify a Tenderer to submit a tender offer in terms of a previous procurement process and deny any such request if as a consequence:

- a) an individual firm, or a joint venture as a whole, or any individual member of the joint venture fails to meet any of the collective or individual qualifying requirements;
- b) the new partners to a joint venture were not prequalified in the first instance, either as individual firms or as another joint venture; or
- c) in the opinion of the Employer, acceptance of the material change would compromise the outcome of the prequalification process.

F.3.2 Issue Addenda

If necessary, issue addenda that may amend or amplify the tender documents to each Tenderer during the period from the date that tender documents are available until three days before the tender closing time stated in the Tender Data. If, as a result, a Tenderer applies for an extension to the closing time stated in the Tender Data, the Employer may grant such extension and, shall then notify all Tenderers who drew documents.

F.3.4.3 Make available the record outlined in F.3.4.2 to all interested persons upon request.

F.3.5 Two-envelope system

F.3.5.1 Where stated in the tender data that a two-envelope system is to be followed, open only the technical proposal of valid tenders in the presence of Tenderers' agents who choose to attend at the time and place stated in the tender data and announce the name of each Tenderer whose technical proposal is opened.

F.3.5.2 Evaluate functionality of the technical proposals offered by Tenderers, then advise Tenderers who remain in contention for the award of the contract of the time and place when the financial proposals will be opened. Open only the financial proposals of Tenderers, who score in the functionality evaluation more than the minimum number of points for functionality stated in the tender data, and announce the score obtained for the technical proposals and the total price and any points claimed on B-BBEE status level. Return unopened financial proposals to Tenderers whose technical proposals failed to achieve the minimum number of points for functionality.

Where there is an obviously gross misplacement of the decimal point in the unit rate, the line item total as quoted shall govern, and the unit rate shall be corrected.
 - c) Where there is an error in the total of the prices either as a result of other corrections required by this checking process or in the Tenderer's addition of prices, the total of the prices shall govern and the Tenderer will be asked to revise selected item prices (and their rates if bills of quantities apply) to achieve the tendered total of the prices.
 - d) Consider the rejection of a tender offer if the Tenderer does not correct or accept the correction of the arithmetical error in the manner described above.
- F.3.10** **Clarification of a tender offer**

FORM F: CERTIFICATE OF INDEPENDENT BID DETERMINATION (MBD 9)

MBD 9

CERTIFICATE OF INDEPENDENT BID DETERMINATION

1. This Municipal Bidding Document (MBD) must form part of all bids¹ invited.
2. Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
3. Municipal Supply Regulation 38 (1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
 - a. Take all reasonable steps to prevent such abuse;
 - b. Reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
 - c. Cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.
4. This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
5. In order to give effect to the above, the attached Certificate of Bid Determination (MBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.

submitted to the engineer at least four weeks before site work is due to commence. Ready mixed concrete of the design strength shall be obtained locally for the foundations. The Engineer shall inspect foundation steel immediately before concrete pouring. Concrete foundations shall protrude at least 300 mm above ground level and shall be finished smooth.

Each mast shall be supplied with foundation bolts and templates. The bolts shall be hot dip galvanized over their entire length to SANS Specification No. 763/1977. Two galvanized nuts, two washers and one spring washer shall be supplied for each bolt. The number of foundation bolts shall be determined according to the design above. Calculations shall be submitted upon request.

A foundation plan, adequately designed for the conditions as per specification, and based on a soil bearing capacity of less than 150kPa, giving details of the reinforcing required shall be submitted. Soil pressure and overturning safety factor shall be stated. All reinforcing and foundation bolts shall have a minimum of 100mm concrete cover. The 28 days cube strength of the concrete shall be 25Mpa.

All foundations shall have a circular flat base from which a square plinth shall rise to above the surrounding ground level.

One or two PVC, Class B cable sleeves shall be provided from the centre of the top of the foundation plinth, through the concrete to a point 500 mm below ground level on the side of the plinth.

After casting of the foundation, the slab shall be covered by earth, properly compacted. The area around the plinth shall be brought to the original level and shall be left neat and tidy.

3.3.3 Construction

The proposed construction of the mast is 30m high multi sectional mast. Each section shall be constructed from a steel plate, which is cut to size, bent into a 6-sided "half shell" and welded together. The mast manufacturer must be ISO9001-2000 certified and hot dipped galvanized to ISO 1461.

The masts shall be constructed from multi sectional mast, when assembled. Each section shall be constructed from a steel plate, which is cut to size, bent into a 6-sided "half shell" and welded together. The mast manufacturer must be ISO9001-2000 certified and hot dipped galvanized to ISO 1461. There shall be no fillet welds of the overlaps. The sections shall be joined by friction fit only.

The masts shall be of lightweight construction and a base plate shall be welded to the bottom end of the lowest section suitable drilled for foundation bolts.

All welding to be subject to SANS Spec 044 Part 3 Grade B and shall be carried out by SANS coded welders only.

Proof that all welders have been tested by the SANS must be submitted on request. Inspection and acceptance certificates shall be furnished on request.

The steel used in the manufacture of the mast shall have an ultimate tensile strength of between 450 and 620 Mpa and identical to SANS 1431 grade 300WA steel.

Proof must be supplied that the manufacturer is ISO 9001 accredited.

3.3.4 Dimensions

The masts offered shall give an overall flood light mounting height of 30m. The cross-section and wall thickness of the mast must be determined on the basis of the working loads.

3.3.5 Working loads

The masts shall be designed in accordance with the SANS 02254 Code of Practice for the design and construction of lighting masts. The following site factors shall be considered:

<i>Contractor</i>	<i>Witness 1</i>	<i>Witness 2</i>	<i>Employer</i>	<i>Witness 1</i>	<i>Witness 2</i>

- Design wind speed =40m/s
- Class of structure =B
- Category of terrain =2
- Altitude of site =1200 m

The mast shall carry at its top 6 x Min 470W LED Flood lights evenly spread around its circumference supported by a luminaries ring.

Data on wind induced oscillations and the dynamic behaviour of the mast shall be submitted.

3.3.6 Raising and Lowering Device

The structure will be fitted with steel wire ropes and a winch for the purposes of lowering the luminaire ring. The portable winch, used for the raising and lowering of the luminaire ring, shall be a double drum type, as this unit meets all international safety requirements, ensuring that, even in the event of one of the ropes breaking, the luminaire ring is still secured by the second rope.

3.3.7 Hoisting Unit

This shall be a double drum worm gear winch with a 50:1 ratio and suitable for manual or power operation. The winch shall run in a fully enclosed oil bath.

It shall be possible for the winch to be removed, if so desired, thus not requiring a winch in each mast.

3.3.8 Access Opening

An access door adequately protected against the weather shall be provided in the mast, with the bottom lintel 600mm above the base plate. The door shall be adequately protected against vandalism and secured by three screws requiring a special opening tool.

A doorframe shall reinforce the opening in the mast.

The mounting strips welded opposite the door opening shall be drilled for the mounting of a control board. Earth terminals, as well as a support bar for the incoming supply cables, shall be provided below the door opening.

3.3.9 Corrosion Protection

All parts of the mast and raising and lowering device, not specified as manufactured from stainless steel, shall be hot dip galvanized to SANS Specification No. 763/1977 and inspection certificates provided if required.

No welding, drilling, punching, bending or removal of burrs shall be carried out after the galvanizing process has been completed.

3.3.10 Electrical Connection to the Luminaires

A flexible, heavy-duty 5-core trailing cable of the correct size, which runs over a separate set of Aluminium sheaves at the head frame, shall be provided. Sheaves shall be of Aluminium, running on Vesconite shafts. The shafts shall be positively secured from rotating in their housings. The Aluminium sheaves shall be adequately sized to prevent deformation of the cable.

The trailing cable shall be firmly connected to the luminaire carriage at its one end and to the clevis plate at the other end. Suitable connectors of the CEE type of connectors meeting IP55 within DIN 40-050 shall be provided.

A fully enclosed distribution board shall be provided for each mast, containing:

- 1 – 3 pole isolators (main switch)
- 3 – single pole MB's (lights)
- 1 – single phase switched socket outlet for the use of a power tool
- 1 – two pole earth leakage unit protecting the single-phase outlet
- 1 – 5 pin CEE sockets
- 1 – adequately rated Telemecanique contactor
- 1 – single pole MCB acting as by-pass switch

<i>Contractor</i>	<i>Witness 1</i>	<i>Witness 2</i>	<i>Employer</i>	<i>Witness 1</i>	<i>Witness 2</i>

- 1 – photo cell
- 1 –15 Amp 3 phase C/B connected to a 25 Amp female welding socket outlet.

All circuit breakers and isolators shall have a rupturing capacity of 5 kA and shall bear the mark of the SANS and shall be accessible through cut-outs in the cover without having to remove the cover.

All equipment shall be clearly marked with engraved labels. No stick-on embossed tape shall be used. The distribution board shall be fully wired and ready for connection to the incoming supply cables.

3.3.11 Earthing

The earthing of the mast will be done according to the relevant SANS specifications and will be done in such a way that no copper conductors will be visible, once the job is completed.

3.3.12 Luminaires

Luminaires shall be designed and mounted to give a uniform circular light distribution on the ground. Luminaires shall be manufactured from materials which will not degrade from ultra- violet light or corrosion. Reflectors shall be guaranteed not to lose reflectivity over the life span of the luminaire. All control gear shall be mounted in a compartment attached to the luminaire. The control gear and the compartment shall be adequately rated to operate in the high ambient temperatures of Ehlanzeni District (Lowveld), without undue ageing. Plastic trays, brackets and retaining clips will not be accepted.
